Summary

Python Developer with 2+ years of commercial experience building high-throughput backend microservices and data pipelines with Flask, FastAPI, SQLAlchemy and PostgreSQL. Strong foundation in asynchronous processing (RabbitMQ), hybrid database architectures (PostgreSQL/MongoDB/TimescaleDB), automated testing and Docker-based CI/CD. Master's student in Software Systems at Masaryk University. Actively expanding into Generative AI, RAG and LLM integrations.

Top Skills

- **Languages & Core:** Python (typed), Flask, FastAPI, Pydantic, SQL, REST APIs, C#
- **Databases & Messaging:** PostgreSQL, SQLAlchemy, Alembic, TimescaleDB, MongoDB, RabbitMQ
- **Testing & DevOps:** pytest, Docker, CI/CD pipelines, Git, GitHub

Languages

- Czech – Native
- English – C1 (Fluent)

Experience

Python Developer, Development777

09/2024 – Present | Brno, South Moravia, Czechia

- Engineered a high-throughput microservices architecture using Python, Flask and FastAPI to resolve system bottlenecks and optimize API performance.
- Integrated RabbitMQ for asynchronous data processing, ensuring system stability under high loads.
- Designed a scalable database persistence strategy utilizing PostgreSQL, MongoDB and TimescaleDB partitioning to optimize time-series query execution speeds.
- Built the data access layer with SQLAlchemy and managed PostgreSQL schema migrations with Alembic.
- Covered services with automated tests (pytest) and delivered changes through a PR-reviewed CI/CD workflow.
- Containerized microservices using Docker to streamline CI/CD delivery and local environments.

Education

Master of Engineering – MEng, Design and Development of Software Systems

Masaryk University Brno, Faculty of Informatics

09/2025 – 06/2027

Bachelor's degree, Programming and Development

Masaryk University Brno, Faculty of Informatics

09/2022 – 06/2025

Projects

Developer Portfolio & Web Projects

Built and maintained a personal portfolio showcasing software development projects and API design.
