Summary

Python Developer with 2+ years of experience building high-throughput backend microservices and data pipelines. Master's student in Software Systems at Masaryk University with a strong foundation in asynchronous processing (RabbitMQ), hybrid database architectures (PostgreSQL/MongoDB), and Docker. Actively expanding technical scope into Generative AI, RAG concepts, and LLM integrations.

Top Skills

- Languages & Core: Python, FastAPI, Flask, C#, SQL, REST APIs
- Databases & Messaging: PostgreSQL, TimescaleDB, MongoDB, RabbitMQ
- DevOps & Tools: Docker, GitHub, CI/CD Pipelines, Git

Languages

- Czech
- English

Experience

Python Developer, Development777

09/2024 – Present | Brno, South Moravia, Czechia

- Engineered a high-throughput microservices architecture using Python, Flask, and FastAPI to resolve system bottlenecks and optimize API performance.
- Integrated RabbitMQ for asynchronous data processing, ensuring system stability under high loads.
- Designed a scalable database persistence strategy utilizing PostgreSQL, MongoDB, and TimescaleDB partitioning to optimize time-series query execution speeds.
- Containerized microservices using Docker to streamline CI/CD delivery and local environments.

Education

Master of Engineering - MEng, Design and development of software systems,

Masaryk University Brno, Faculty of Informatics

09/2025 – 06/2027

Bachelor's degree, Programming and development,

Masaryk University Brno, Faculty of Informatics

09/2022 – 06/2025

Projects

Developer Portfolio & Web Projects

Built and maintained personal portfolio showcasing software development projects, API design.
